Three Ways PSH Is Like Pizza

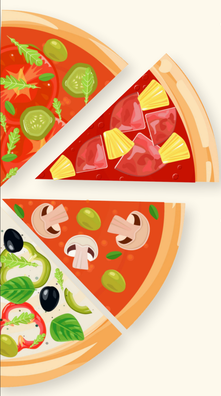

With Many High-Quality ~~Toppings~~ Solutions to Choose From

Comparing a patient-centered, physician-led, coordinated model of care to pizza may be cheesy, but it's also true—pizza and PSH have some important things in common.

Think of the PSH core principles as the essential ingredients. But on top of the basics, there's a host of customizable components, ready for health care organizations of all sizes, settings, and service lines to adapt to their unique needs.

3 things PSH & pizza have in common:

You must be at the table to get your slice

Quality anesthesia is key to the success of hospitals and health systems, but anesthesiologists aren't always recognized as leaders and revenue generators. PSH arms anesthesiologists with the tools, messages, and tactics needed to grab a seat at the table, demonstrate how anesthesiology impacts revenue, and tackle challenges at all stages of the perioperative continuum. We're handing you the menu *and* the recipes.

It's customizable—you can select only the solutions you want

We're all different, so we want and need different things. Fortunately, like a good pizza, PSH is customizable. That means you can take only what you need, personalizing solutions to fit your organizational processes, framework, language, and taste. Customizing PSH enables organizations—any service line, surgical setting, or group size—to own modifications and embed changes. It's literally designed to adapt.

The selection of solutions is robust and prepared by qualified professionals

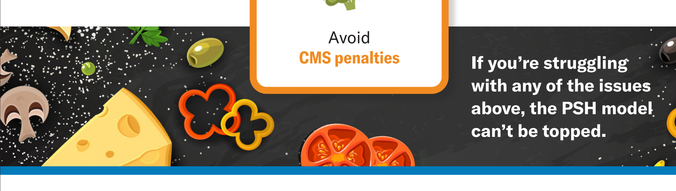

There's a lot to choose from with PSH, and every high-quality solution is professionally prepared. We can't vouch for the folks chopping your mushrooms and pepperoni, but PSH's modular solutions and systems have been crafted, tested, and enhanced by top thought leaders in our field. They've done the prep work. You enjoy the results of their labors.

PSH delivers.

PSH gives you the tools to improve patient **outcomes**, elevate patient **satisfaction**, drive increased **savings**, improve **preoptimization**, and much, much more. PSH can help you...

- Excel in **value-based care payment models**
- Decrease **medical errors** and **complications**
- Set expectations for **discharge planning**
- Standardize **patient education tools** and **strategies**
- Identify and address **risk factors**
- Reduce **readmission rates**
- Improve **OR efficiency**
- Reduce **case cancellations**
- Succeed in **Merit-Based Improvement Pathways (MIPS)** and **MIPS Value Pathways (MVPs)**
- Reduce length of **hospital stays**
- Increase **patient involvement** in care
- Maximize **case management**
- Avoid **CMS penalties**

If you're struggling with any of the issues above, the PSH model can't be topped.
